Application deployment

Microsoft SQL Server ODBC Driver

Microsoft SQL Server ODBC Driver

The Microsoft SQL Server ODBC Driver is an ODBC driver for third-party applications to connect to a SQL Server database.

Installation

Refer to the official Microsoft documentation to install [Install the Microsoft ODBC driver for SQL Server \(Linux\)](#).

FAQ

You may encounter the following errors when performing the installation by referring to the above instructions:

```
dpkg: error processing archive /var/cache/apt/archives/
msodbcsql18_18.3.3.1-1_arm64.deb (--unpack):
 unable to install new version of '/usr/lib64/libmsodbcsql-18.so': No such file
 or directory
Errors were encountered while processing:
 /var/cache/apt/archives/msodbcsql18_18.3.3.1-1_arm64.deb
E: Sub-process /usr/bin/dpkg returned an error code (1)
```

This issue is due to the fact that Microsoft's installer tries to install files under both `/usr/lib` and `/usr/lib64`, but Rockchip's Chromium needs to soft-link `/usr/lib64` to `/usr/lib` in order to work properly, which causes `dpkg` to fail to install the files correctly installation.

Workaround

Please execute the following command to remove the soft link:

```
sudo rm /usr/lib64
```

 **WARNING**

This will cause Chromium to function abnormally and it is not safe to back out.
